# POST-GRADUATE INSTITUTE OF AGRI-BUSINESS MANAGEMENT (PGIABM)

# 1. AN OVERVIEW OF AGRI-BUSINESS

Successful agricultural sector is the key to all developmental problems of a country like India. The number of agricultural holdings going up from 50 million at the time of independence to more than 90 million now resulting in what is called 'Handkerchief Agriculture'. We have also allowed our urban population and organised labour to reap a disproportionate share of benefit, thus not only alienating the great part of our nation but also creating disincentives for building productive agricultural base. This can be resolved by bringing a balance between industry and agriculture. There exists a tremendous potential for commercial and export oriented agri-business

#### 2. PROSPECTS OF THE AGRI-BUSINESS

The agri-business sector in India is in its infancy in some sub-sectors but is fairly developed in others. Nevertheless, the potential for development of this sector is immense. India has a vast geographic spread, varied agro-climatic conditions, soils suitable for the production of an incredible variety of food and non-food crops and a formidable agri-resource base.

India is among the five major producers of sugar, tea, tobacco, spices, fruits, vegetables, cotton, jute, milk and milk products, cereals like rice and wheat, and oilseeds like groundnut and castor. India's population has crossed the billion. Presently, per capita consumption of fruits, milk, eggs, cereals, and pulses is very low compared to recommended standards. Even an increase of 5 to 10 per cent in per capita consumption translates into a large demand potential. Secondly, there is a large scope for value addition in almost all sub-sectors of agri-business.

Thirdly, the agri-business sector in India is highly labour-intensive. It has potential for absorbing and creating employment for about 130 million new entrants into the labour force, majority of them from the rural areas.

Fourth, even considering only the top 10 per cent of the population, the domestic market is large in absolute terms accounting for about 25 per cent of consumer spending. Considering that the country has already achieved a very high level of savings (about 25 per cent), it would be logical to assume that the major portion of further increases in income would likely go into consumer spending.

Finally, agri-industrial potential becomes manifold when the processing possibilities of the entire commodity by-product system are taken into account. Every primary agricultural commodity and organic residue, animal by-products and wastes, fishery and forest by-products have potential for developing a series of industries, if the primary commodity, its products, and waste matter are scientifically processed.

The prospects of the agri-business sector in India are quite good given the facts of Indian situation. Not only can the agri-business sector meet the food and related demands of India's large population; it can also contribute significantly to exports. There is vast potential still untapped. Although area-expansion is not possible, the abysmally low levels of yield hold out the promise of substantial increase in agriculture production. Similarly, agriculture and its allied sector in India is highly underdeveloped. We shall have to make agriculture much more of a commercial nature. The holdings will have to be made amenable to modernized agriculture. Rather than under the force of law, allowing sale and purchase of agriculture land freely should do such. The irrigation of potential areas will have to be better tapped and utilized. Agriculture with the use of better seeds, improved agronomic practices, better mechanized operations and more developed markets can really make the yield go up at a much faster pace. India can be agriculture giant.

Similarly agro-processing industries will have to be more efficient. They need to be modernized. Efficient technology for better output yield will have to be employed. The fact that lot of good companies in the private sector are going into seed production and agro-processing heralds a new phase of agri-business in India. One can be quite optimistic about it.

Since 1991, fruits and vegetable-processing industry has registered an annual growth of 26 per cent. Food processing industry has attracted a large number of investors from India and abroad. With the kind of interest being generated amongst domestic as well as foreign investors/entrepreneurs in fruit and vegetable processing industry India has the potential to become one of the leading countries in fresh and processed products of fruits and vegetables.

# 3. EMERGING SCENARIO IN AGRI-BUSINESS

Unlike industry, which has already established organisation to argue its case, while the voice of agriculture is fragmented. Currently, agriculture is often seen as an inefficient, problem-ridden producer of food and not as a positive driver of economic growth. Real development will take place only when agriculture becomes an equal partner with industry in the growth crusade.

Agricultural sector accounts for 14 per cent of India's GDP and employs more than 59 per cent of its workforce. Development in this sector has a far-reaching impact throughout the economy and is vital if we are to provide higher incomes and liberation for the millions of Indians who work in agriculture.

Considering the above scenario prevailing in the country and its prospects, Junagadh Agricultural University has decided to start a "Post Graduate Institute of Agri-Business Management" with the following broad objectives:

- 1. To award the degree of MBA in Agri-Business.
- 2. To create infrastructural facilities for research and teaching in Agricultural Business Management.
- 3. To develop leadership for agri-business sector equipped with enhanced sense of commitment, integrity and ethics.
- 4. To develop skills of practical application of modern management tools and techniques as applied to agribusiness sector.
- 5. To encourage entrepreneurial spirit in students to make them effective change agents in the agrienterprise sector.
- 6. To undertake research projects on client specific problems and general problem facing an industry segment.
- 7. To collaborate with other institutions in the state and the country to further the above.

The degree awarded will be MBA in Agri- Business.

# 4. MISSION

The programme mission is to promote professional management skill for corporate sector and self-employment sector of democratic, sustainable pollution free, novel, politically desired, technology oriented and equitable socio-economic development of farming community. The core of institute operating philosophy is to build and sustain the relationship between farming community and agencies involved with it, which can improve their standard of living through higher income from agri-business.

# 5. VISION

To become most reputed, developed, self sufficient, job oriented, innovative, eco-friendly social institute consistent with national agricultural policy.

#### 6. CAMPUS LOCATION AND FACILITIES

Junagadh is a land of lions and saints, the Birth District of Mahatma Gandhi, Father of the Nation and field of work of Poet Narsinh Mehta, is situated about 100 km south of Rajkot, 90 km north from famous Somnath Temple and 200 km from Lord Krishna's Dwarkapuri on the Ahmedabad-Veraval broadgauge railway line.
